EDUCATION

James Madison University, Harrisonburg, VA

Jan 2024-Present

Bachelor of Science, Computer Science

GPA: 3.97

Relevant Coursework: *Object-Oriented Programming, Data Structures Analysis of Algorithms, Discrete Structures I/II, Computer Systems I/II, Applied Algorithms, Application Development, Web Development, Programming*

Languages

EXPERIENCE

Henrico County

May 2025-Aug 2025

Web Intern II

- Rebuilt and modernized the Herico iOS app using Swift and SwiftUI, focusing on a clean architectural redesign.
- Developed a thread-safe caching system using SwiftData, integrating a struct-class transfer system to safely manage and send data across threads..
- Engineered an asynchronous API request handler capable of managing single or concurrent requests, with built-in caching and task coordination.
- Designed and implemented dynamic UI screens for displaying API-driven content and navigating seamlessly throughout the app.
- Authored clear user documentation and conducted thorough, well-structured testing to ensure usability and reliability.

Hachi

Jan 2025-May 2025

Software Engineer

- Shaping the future of efficient collaboration by developing a high-performance prototype using modern technologies.
- Designed and built a scalable prototype using React.js, Playwright, and Pydantic.
- Implemented end-to-end testing with Playwright to ensure reliability and performance.
- Collaborated with cross-functional teams to integrate backend and frontend solutions seamlessly.

MusicCPR

May 2024-Aug 2024

Volunteer Front-end Developer

- A research project led by Professor Michael Stewart meant to facilitate learning for musically inclined students.
- I worked to help design the pages of the website, such as the landing page and about pages, implement audio waveforms, and format code to specific coding styles, as well as fix any errors in the code.
- I helped gather data for a research paper on the related topic and worked with peers to identify onboarding issues and improve the development area.

DoorDash

Nov 2022-Jan 2024

Dasher

- Developed strong self-discipline and the ability to manage tasks independently.
- Effectively prioritized and managed time to meet deadlines and achieve goals.
- Provided excellent service to customers through long distance communication.
- Developed a level of responsibility and self-accountability.
- Monitored and recorded gas mileage to maintain efficiency.

Hardee's

Sept 2021-Nov 2024

Crew Trainer/Cashier

- Trained new hires on company procedures, ensuring compliance with operational standards.
- Monitored and optimized workflow to maintain smooth operations during peak hours.
- Properly led new hires, controlling their workflow and overseeing their responsibilities.
- Trained new hires to make sure they understood how to perform tasks.
- Collaborated effectively with team members to ensure smooth operations and excellent customer service during peak hours.

PROJECTS

- **Personal Portfolio Site:** Developed a personal portfolio website using HTML, CSS, and JavaScript to showcase my resume, upcoming projects, and finished coding projects. Integrated GSAP and Three.js to enhance interactivity and visual appeal. purejerome.github.io/jeromewebsite.
- **AutoRE:** A custom Chrome extension built with JavaScript and the Chrome Extensions API. It automates interactions on the RepostExchange site by screen-reading and simulating common human clicks on the site, reducing manual effort and improving efficiency. <https://github.com/purejerome/AutoRE>.
- **GPS:** Created a basic GPS made in Java in my Personal Navigation Systems class. This GPS had the capability to reroute, read different geo files and convert them to a map, read in geo location data, and map match geo location data to the map printed on screen. <https://github.com/purejerome/finalBackUp>.
- **UnitED:** A custom calculator made in my Software Development class using Java. The main functionalities of the calculator included basic arithmetic, exponent and decimal compatibility, unit conversions, a saved and printable history of calculations, a web help page, and persistent settings.
- **SHOWSCOPE:** A frontend only website created for my Application Development class using HTML, CSS, and JavaScript. This website was designed to view lists of popular movies, TV shows, and anime, and store users' reviews and ratings using local storage. It used the MyAnimeList and IMDb APIs to collect and present data. <https://github.com/purejerome/CS-345-groupfinalproj>.
- **TASync:** A full stack website made with React and Django for my Web Development class. This website served as a place to schedule TA hour shifts for students, TAs, and educators to interact with. This used many React/JavaScript libraries such as ChakraUI, TanStack Router, and OpenAPI.
- **Curses Spreadsheet:** A spreadsheet built using Ruby and the Curses gem for my Programming Languages class. It used a custom made programming language to be used in the cells. Each cell could either store primitive data, evaluate code, reference other cells, or any combination of the three.
- **y86 Simulator:** A computer architecture simulator coded in C for my Computer Systems I class. This project simulated a simplified version of the x86 architecture to understand the fundamentals of the architecture, such as memory, assembly, registers, instruction sets, and the basics of the C programming language.

SKILLS

Technical/Computer Skills: Java, Python, Ruby, C, React.js, HTML, CSS, JavaScript, Swift, SwiftUI, Git

Languages: English: Fluent, French: Intermediate

HONORS AND AWARDS

- President's List
- Dean's List
